Housing Subsidy Reform Project Management System

Date: November 28, 2025
Version: 1.0

Author: Seth Foss, Roosevelt House Public Policy Institute

Executive Summary

This document provides comprehensive guidance for integrating the TCAP Project Dashboard with your ChatGPT research sessions, GitHub repository, and Notion workspace. The dashboard serves as a centralized command center for managing all aspects of the Housing Subsidy Reform policy proposal project.

Dashboard Overview

Key Features

Home Dashboard

- Real-time project metrics (29 total tasks, 3.4% completion)
- Current phase indicator (Research & Drafting Phase)
- Quick links to integrated platforms
- Recent activity feed

Task Management

- Kanban board with drag-and-drop functionality
- 29 tasks organized by status: Not Started (27), In Progress (1), Complete (1)
- Filtering by section, owner, due date
- Inline editing capabilities

Timeline View

- Gantt-style visualization of all tasks
- Milestone tracking for key deliverables
- Dependency mapping
- Progress against deadlines

Resources Library

- 20 repository files with full metadata
- Searchable and filterable by category
- Direct links to source documents
- Document type indicators

Integration Hub

- GitHub repository status monitoring
- ChatGPT conversation tracking
- Notion workspace synchronization
- API connection management

Analytics Dashboard

- Task distribution charts
- Progress tracking metrics
- Owner workload visualization
- Risk indicators and alerts

Integration Setup

1. GitHub Repository Integration

Repository Information:

- **Repository:** `github.com/sfosss/HousingPolicyResearch`
- **Branch:** `main`
- **Structure:**
  - `/docs/` - Integration architecture and security
  - `/capstone/` - Project documentation
  - `/SECURITY.md` - Security policy

Setup Steps:

1. **Clone the repository locally:**

   ```
   git clone https://github.com/sfosss/HousingPolicyResearch.git
   cd HousingPolicyResearch
   ```

2. **Create feature branch for dashboard integration:**

   ```
   git checkout -b feature/project-dashboard-integration
   ```

3. **Add dashboard link to** README.md**:**

```
## Project Dashboard
Access the interactive project management dashboard:
[TCAP Project Dashboard](your-dashboard-url)
```

4. **Commit and push:**

```
git add README.md
git commit -m "Add project dashboard integration link"
git push origin feature/project-dashboard-integration
```

5. **Create pull request** for team review

Automated Synchronization:

Create GitHub Actions workflow (`.github/workflows/sync-dashboard.yml`):

```
name: Sync Dashboard Data

on:
  push:
    branches: [main]
  schedule:
    - cron: '0 0 * * *'  # Daily at midnight

jobs:
  sync:
    runs-on: ubuntu-latest
    steps:
      - name: Checkout repository
        uses: actions/checkout@v2

      - name: Update task data
        run: |
          # Export tasks from GitHub Issues to CSV
          # Update dashboard data file
          # Commit changes if updates exist
```

2. ChatGPT Integration

Current Configuration:

- **Space:** NYC Housing Subsidy Policy Reform Proposal
- **Conversation:** Housing subsidy research project
- **Status:** Active connection

Linking Dashboard to ChatGPT:

1. **Save dashboard URL in ChatGPT custom instructions:**
   - Go to ChatGPT Settings → Custom Instructions
   - Add: "Project dashboard: [your-dashboard-url]"
   - Add: "GitHub repository: github.com/sfosss/HousingPolicyResearch"
2. **Reference dashboard in research queries:**

```
"Check the project dashboard for current task status
before proceeding with analysis"
```

3. **Export conversation summaries:**
   - Use ChatGPT export feature
   - Store in repository at `/docs/chatgpt-exports/`
   - Link from dashboard Resources view

Automated Updates:

Create scheduled prompts for:

- Weekly progress summaries
- Task completion notifications
- Risk alerts for overdue items
- Resource cataloging for new research

3. Notion Workspace Integration

Workspace Information:

- **Workspace:** Housing Policy Capstone
- **Database:** NYC Housing Subsidy Ops Tasks
- **Status:** Pending authentication

Setup Steps:

1. **Create Notion integration:**
   - Go to https://www.notion.so/my-integrations
   - Click "New integration"
   - Name: "TCAP Dashboard Sync"
   - Copy integration token (starts with `secret_`)
2. **Share database with integration:**
   - Open your Notion database
   - Click Share → Invite → Select "TCAP Dashboard Sync"
3. **Configure two-way sync:**
   From Notion to Dashboard:

   ```
   // Fetch tasks from Notion API
   fetch('https://api.notion.com/v1/databases/{database_id}/query', {
     method: 'POST',
     headers: {
       'Authorization': 'Bearer ' + notion_token,
       'Notion-Version': '2022-06-28'
     }
   })
   ```

   From Dashboard to Notion:

   ```
   // Update Notion page properties
   fetch('https://api.notion.com/v1/pages/{page_id}', {
     method: 'PATCH',
     headers: {
       'Authorization': 'Bearer ' + notion_token,
       'Notion-Version': '2022-06-28',
       'Content-Type': 'application/json'
     },
     body: JSON.stringify({
       properties: {
         Status: { status: { name: 'In Progress' } }
       }
     })
   })
   ```

4. **Set up sync schedule:**
   - Every 15 minutes for active tasks
   - Hourly for completed tasks

- Real-time for critical path items

Database Schema Mapping:

Notion Property	Dashboard Field	Type
Task	task	Title
Section	section	Select
Owner Persona	owner	Select
Status	status	Status
Due Date	due_date	Date
Frequency	frequency	Select
Trigger	trigger	Text
Artifact	artifact	Text
Notes	notes	Text

4. Data Security & Access Control

Security Measures:

1. **API Key Management:**
   - Store all API keys in `.env` file (never commit to repository)
   - Use environment variable injection at runtime
   - Rotate keys every 90 days
2. **Access Control:**
   - Dashboard requires authentication for write operations
   - Read-only public view for stakeholders
   - Admin panel for project managers only
3. **Data Privacy:**
   - No sensitive tenant data in dashboard
   - Aggregate statistics only
   - Compliance with FERPA/research ethics
4. **Backup Strategy:**
   - Daily automated backups to GitHub
   - Weekly exports to local storage
   - Version control for all data changes

Environment Variables:

Create `.env` file in dashboard root:

```
# GitHub<a></a>
GITHUB_TOKEN=your_github_personal_access_token
GITHUB_REPO=sfosss/HousingPolicyResearch

# Notion<a></a>
NOTION_TOKEN=secret_your_notion_integration_token
NOTION_DATABASE_ID=your_database_id

# ChatGPT (if API access available)<a></a>
```

```
OPENAI_API_KEY=your_openai_api_key

# Dashboard<a></a>
DASHBOARD_ADMIN_PASSWORD=your_secure_password
```

Dashboard Usage Guide

For Project Managers

Daily Workflow:

1. **Morning Check-in (9:00 AM):**
   - Open dashboard home view
   - Review overnight updates and activity feed
   - Check for overdue tasks (red indicators)
   - Update task statuses based on team progress
2. **Mid-day Sync (1:00 PM):**
   - Navigate to Task Board
   - Drag tasks to appropriate status columns
   - Add notes to tasks with blockers
   - Filter by owner to check workload balance
3. **End-of-day Review (5:00 PM):**
   - Check Analytics dashboard for progress metrics
   - Update timeline view with any deadline changes
   - Log risks in Integration Hub
   - Export daily status report for stakeholders

Weekly Activities:

- **Monday:** Review timeline and adjust priorities
- **Wednesday:** Team sync using Task Board as agenda
- **Friday:** Generate and distribute progress report

For Research Team

Using the Dashboard for Research Tasks:

1. **Finding Your Assignments:**
   - Navigate to Task Board
   - Click "Filter by Owner" → Select your persona (e.g., "Policy Analyst")
   - View all tasks assigned to you
2. **Updating Task Status:**
   - Click on task card to open details
   - Update status using dropdown
   - Add progress notes in Notes field
   - Attach relevant documents in Resources
3. **Accessing Resources:**
   - Go to Resources view
   - Search by keyword or filter by category
   - Click resource card to view full description

- Download or open linked documents

4. **Tracking Dependencies:**
   - Timeline view shows task relationships
   - Hover over task to see dependencies
   - Coordinate with team members on blocking items

For Stakeholders

Read-Only Dashboard Access:

1. **Viewing Project Health:**
   - Home dashboard shows high-level metrics
   - Green indicators = on track
   - Yellow = needs attention
   - Red = critical issues
2. **Understanding Progress:**
   - Analytics dashboard provides visual charts
   - Completion percentage shows overall progress
   - Burndown chart indicates if project is on schedule
3. **Reviewing Deliverables:**
   - Resources view lists all completed artifacts
   - Filter by "Deliverables" section
   - Download final versions as available

Workflow Automation

Automated Task Creation

From GitHub Issues:

```
// GitHub webhook listener
app.post('/webhook/github', (req, res) =&gt; {
  const issue = req.body.issue;

  if (issue.labels.includes('task')) {
    // Create corresponding task in dashboard
    createTask({
      task: issue.title,
      section: extractSection(issue.labels),
      owner: issue.assignee.login,
      status: 'Not Started',
      due_date: issue.milestone?.due_on,
      notes: issue.body
    });
  }
});
```

From ChatGPT Research Sessions:

1. At end of research session, prompt:

   ```
   "Generate a task list summary from this session
   in CSV format for dashboard import"
   ```

2. Copy CSV output
3. In dashboard, click "Integration Hub" → "Import Tasks" → Paste CSV

Notification System

Email Alerts:

- Daily digest of task updates
- Overdue task warnings (3 days before due date)
- Milestone achievement notifications
- Risk alerts for critical issues

Slack Integration (Optional):

```
// Post to Slack when task status changes
function notifySlack(task, oldStatus, newStatus) {
  fetch(slack_webhook_url, {
    method: 'POST',
    body: JSON.stringify({
      text: `Task "${task.task}" moved from ${oldStatus} to ${newStatus}`,
      channel: '#housing-policy-research'
    })
  });
}
```

Data Export & Reporting

Generate Status Report

From Dashboard:

1. Go to Analytics dashboard
2. Click "Export" → "Status Report"
3. Select report type:
    - **Executive Summary:** High-level metrics for leadership
    - **Detailed Status:** Complete task list with notes
    - **Risk Report:** Focus on overdue and blocked items
    - **Resource Inventory:** All documents and artifacts
4. Choose format: PDF, Excel, or JSON
5. Download to local drive

Report Schedule:

- Weekly status report (Fridays)
- Monthly comprehensive report
- Milestone completion reports
- Final project closeout report

Sync to GitHub

Automated Nightly Backup:

```
#!/bin/bash
# dashboard-backup.sh<a></a>

DATE=$(date +%Y%m%d)
BACKUP_DIR="backups/$DATE"

mkdir -p $BACKUP_DIR

# Export dashboard data<a></a>
curl https://dashboard-url/api/export &gt; $BACKUP_DIR/tasks.json
```

```
# Commit to repository<a></a>
cd HousingPolicyResearch
git add backups/
git commit -m "Dashboard backup $DATE"
git push origin main
```

Set up cron job:

```
0 2 * * * /path/to/dashboard-backup.sh
```

Troubleshooting

Common Issues

Issue: Dashboard shows "Not Connected" for GitHub

Solution:

1. Check GitHub personal access token is valid
2. Verify token has `repo` scope permissions
3. Update `.env` file with correct token
4. Restart dashboard application

Issue: Notion sync failing

Solution:

1. Verify integration token in Notion settings
2. Confirm database is shared with integration
3. Check database ID matches configuration
4. Review Notion API version compatibility

Issue: Tasks not appearing in Kanban board

Solution:

1. Clear browser cache and refresh page
2. Check filter settings (may be hiding tasks)
3. Verify task data file has correct format
4. Check console for JavaScript errors

Issue: Timeline view not rendering correctly

Solution:

1. Ensure all tasks have valid due dates
2. Check date format (YYYY-MM-DD required)
3. Update browser to latest version
4. Disable browser extensions that may interfere

Support Resources

Documentation:

- Dashboard user guide (this document)
- GitHub repository README
- Notion integration docs

- ChatGPT Space instructions

Contact:

- Project Manager: Seth Foss (seth.foss@hunter.cuny.edu)
- Technical Support: GitHub Issues
- Emergency: See SECURITY.md for responsible disclosure

Best Practices

Task Management

1. **Update tasks daily** to maintain accuracy
2. **Use descriptive notes** for context and blockers
3. **Tag dependencies** in task descriptions
4. **Archive completed tasks** weekly to reduce clutter
5. **Review and adjust dates** proactively

Resource Organization

1. **Use consistent naming conventions** for files
2. **Tag documents** with appropriate categories
3. **Add descriptions** to all uploaded resources
4. **Link related resources** in task notes
5. **Archive outdated materials** to separate folder

Integration Maintenance

1. **Monitor sync status** in Integration Hub
2. **Review logs** for failed synchronization attempts
3. **Update API tokens** before expiration
4. **Test integrations** after any configuration changes
5. **Maintain backup credentials** in secure location

Team Collaboration

1. **Hold weekly dashboard reviews** with full team
2. **Use task comments** for async communication
3. **Respect task ownership** and assignments
4. **Update blockers immediately** to enable help
5. **Celebrate milestone completions** in activity feed

Advanced Features

Custom Views

Create personalized dashboard views:

1. Click "Settings" icon in sidebar
2. Select "Create Custom View"
3. Choose filters, columns, and layout
4. Save view with descriptive name

5. Access from sidebar menu

Bulk Operations

Efficient management of multiple tasks:

1. In Task Board, click "Select Multiple"
2. Check boxes for desired tasks
3. Choose bulk action:
   - Change status
   - Update owner
   - Modify due dates
   - Add tags
4. Confirm changes

API Access

For advanced automation:

Endpoint: `https://your-dashboard-url/api/v1/`

Authentication: Include API key in header

```
Authorization: Bearer YOUR_API_KEY
```

Common Endpoints:

- `GET /tasks` - Retrieve all tasks
- `POST /tasks` - Create new task
- `PATCH /tasks/{id}` - Update task
- `GET /resources` - List resources
- `GET /analytics` - Fetch metrics

Example Request:

```
curl -X GET \
  https://your-dashboard-url/api/v1/tasks \
  -H 'Authorization: Bearer YOUR_API_KEY'
```

Appendix A: Task CSV Template

```
Task,Section,Owner,Status,Due Date,Frequency,Trigger,Artifact,Notes
"Example task name",Research,Policy Analyst,Not Started,2025-12-01,One-time,Recipe,Docx,"Task notes here"
```

Appendix B: Integration Checklist

- [ ] GitHub repository cloned locally
- [ ] Dashboard link added to README
- [ ] GitHub Actions workflow configured
- [ ] ChatGPT custom instructions updated
- [ ] Notion integration created and shared
- [ ] Environment variables configured
- [ ] Security measures implemented

- [ ] Backup automation scheduled
- [ ] Team members granted access
- [ ] Initial data imported successfully
- [ ] All integrations tested and verified
- [ ] Documentation distributed to team

Appendix C: Version History

Version	Date	Changes	Author
1.0	Nov 28, 2025	Initial release	Seth Foss

Appendix D: License & Attribution

Dashboard Application: Custom-built for TCAP project
Data Sources: GitHub, ChatGPT, Notion
Frameworks: HTML5, CSS3, JavaScript (Vanilla)
Icons: Font Awesome 6
Charts: Chart.js 4.0

License: MIT License (see repository for full text)
